To OYC Members:

Due to low lake water levels, the OYC boat launch is in need of repair. For those that still launch their boat or PWC, please do not drive your boat back on to your trailer – instead use your winch to pull your boat into place.

There is a large hole at the end of the cement pad at the launch site and a mound of rock about 5-feet behind that, which has been created by throttling your boat to get it on the trailer. You may notice that your trailer is going deep and off the last cement pad, so be careful pulling out.

We are trying to fix the situation but have to deal with the DEC which may take some time.

Thanks for your patience,

Ken Rescott,
Waterfront Director
